# Operation

# Opening Menu

Run the GlobalFARP software. The Opening menu appears as shown below:

In the countries pane at the left, select the **Laos** country. In the farm animals' pane, on the right, select the **Beef** species. In the languages pane at center, select **English** language. Click the OK button. The main menu of the Beef cattle software appears, as shown below:

Beef_LA_Eng {Version 2023.03.25}			×

About		Ex	it Program

The main menu supports four buttons to evaluate and formulate rations for breeding or growing finishing beef cattle. It also supports tow more buttons for the feed library editor and the Feed Tag program.

- Press the LC\_G button to formulate a least cost ration for growing or finishing beef cattle.
- Press the LC\_B button to formulate a least cost ration for breeding beef cattle.
- Press the EVAL\_G button to evaluate an existing ration for growing or finishing beef cattle.
- Press the EVAL\_B button to enter the feed library editor and manage feed libraries.
- Press the TAG button to enter the feed tag module and estimate the energy values of local feeds.
- Press the Exit button to exit the program.

Before exploring the different modules of the software, click the About button to view information about the program and its authors, as shown below:

#### About {Version 2023.03.25}

Ermias Kebreab, PhD

Abbas Ahmadi, PhD

B. Viennasay, PhD

Beef\_LA\_Lao is a least cost and ration analysis program for beef cattle in Lao language for Laos. It is designed and developed by a team of animal science experts, software engineers, and local lao translators at Global Engagement Office, University of California Davis, USA.

The team members are listed below:

Dr Ermias Kebreab, Associate Dean, College of Agriculture and Environmental Sciences, Director, World Food Center, and Professor and Sesnon Endowed Chair at University of California, Davis, CA USA (ekebreab@ucdavis.edu).

Dr. Abbas Ahmadi, Software Developer, Global Engagement Office, University of California, Davis, CA USA (abahmadi@ucdavis.edu).

Dr. Vongpasith Chanthakhoun, Translator, Lecturer and Researcher, Dean, Faculty of Agriculture and Forest Resource, Souphanouvong University, LuangPrabang, Laos (vongpasith@yahoo.com). Dr. Bounnaxay Viennasay, Vice Director Bounthavyxay Farm Co., Ltd.

# Navigation Bar

The navigation bar has three main options: Files, Go To, and Help.

# Files Menu

Files Go to	Help	
New		
Open		
Save		
Save As		
Exit Program		

The files menu has five submenus for creating new simulation file, opening an existing simulation file, saving a simulation file with different name, and exiting the program.

Go To Menu

Files	Go to Help	
1	Animal Info	L
	Feeds	
	Ration	
	Constraints 🕨	Nutrient Constraints
	Reports	Feed Constratints
		Feed Group Constraints
		Ratio Constraints

The Go To menu has five submenus for going to Animal Info, Feeds, Ration, Constraints, and Reports, The Constraints submenu, in turb, has four more submenu to go to Nutrient Constraints, Feed Constraints, Feed Group Constraints, and Ration Constraints. Note that the Constraints submenu is only available in the formulation module. The evaluation module does not have any constraints submenus.

Help Menu

Files Go	to Hel	p	
	r	Contents and Topics	
	]	About the Program	
		Contact Us	

The Help menu has three submenus as listed below:

### Contents and Topics

Currently this local web site is empty, but will be populated at the end, after the software is fully developed.

### About the Program

This submenu shows the same information as provided by the About button in the Main menu.

# Contact Us

This screen shows the US contact at the top and a scrollable list of our contacts in different countries including Laos. Local farmers in Laos are encouraged to contact our local team members in Laos and they will contact us if needed.

# ANIMAL INFORMATION

There are four different animal information screens.

Animal Information Screen for Growing or Finishing Beef Cattle

Growing or finishing beef cattle have two animal information screens: one for the evaluation module (EVAL\_G) and the other for the formulation module (LC\_G). These two screens are the same except for one data entry field, the **daily gain**. The formulation module needs the daily gain field to calculate the nutrient requirements, but the formulation module does not need this data entry field, because it will calculate the daily gain based on the existing ration.

# Animal Information Screen for Breeding Beef cattle

	Main Menu				Main Menu

Breeding beef cattle have two animal information screens: one for the evaluation module (EVAL\_B) and the other for the formulation module (LC\_B). These two screens are the same except for the daily gain field.

Most of the following fields are common to all four modules, but some of the fields may be present in one module but not in others.

### Title

Enter a name and/or address or other identification for your ration.

# Beginning body weight

The body weight at the beginning of feeding phase. The weight is based on the live shrunk body weight. It is defined as weight after an overnight feed and water shrink (generally equivalent to about 96 percent of unshrunk weights taken in the early morning). Usually equivalent to feedlot's In-Weight.

### Ending body weight

The desired body weight at the end of feeding phase. The weight is based on the live shrunk body weight. It is defined as weight after an overnight feed and water shrink (generally equivalent to about 96 percent of unshrunk weights taken in the early morning). Usually equivalent to feedlot's selling pay-weight.

### Daily gain

The average daily gain per animal per day during feeding phase. For the pregnant cows and heifers do not include the fetal gain which is 0.9 lb/day (0.4 kg/day). For pregnant females specify maternal gain which is about 0 - 1 lb/day (0 - 0.45 kg/day). Live gain is usually equivalent to feedlot's gain from in-weight to selling-pay-weight.

### Daily overhead cost

The nonfeed costs per head per day using the local currency.

### Sex

Enter Steer, Heifer, Bull, or Cow.

### Breed

Enter English, Holstein, Exotic, Brahman, or Other.

### Age

Enter Calf, Yearling, or Adult.

### Frame

Enter Medium, or Large. Frame score describes the skeletal size of cattle. Frame score depends on age, hip height, and nutrition level.

### Condition score

Enter 1 through 9. Condition score relates to the degree of fatness.

1 = Emaciated

- 5 = Average
- 9 = Very fat

#### Compensatory growth

Enter Yes or No. Adjustment for accelerated growth following a period of limited feed intake.

### Feed intake adjustment

Due to certain feeding situations (ration quality, type of cattle, etc.), it may be necessary to adjust the total estimated consumption of the ration without regard of different ingredients.

- An entry of "0" leaves the estimated consumption unadjusted.
- An entry of -20 means that the animals will eat 20% less than normal.
- An entry of +15 implies that the animals will eat 15% more than normal.

### Maintenance adjustment

Due to climate, type of cattle, etc., it may be necessary to adjust the Net Energy required for Maintenance (NEm, Mcal/day).

- An entry of "0" leaves the estimated NEm unadjusted.
- An entry of -20 means that the animal requires 20% less than normal.
- An entry of +15 implies that the animal requires 15% more than normal.

#### Sex

Enter Heifer, Bull, or Cow.

### Milk PRODUCTION

Daily milk production expressed as kg/day or lb/day. The normal range is 5 - 10 Kg/day.

# Milk fat

Percent fat in milk. Normal range is 3 - 6 %

### Calf birth weight

Expected birth weight of calf expressed in kg or lb.

#### Days pregnant

Days after conception. Gestation period is 285 days.

### Feed implant

None-use of feed implant reduces the voluntary intake of cattle by 8% and increases the maintenance energy requirement (NEm) by 8%.

# Feed additive

Feed additive effects the energy requirement and voluntary intake of cattle:

Feed Additive	NEm Requirement	Feed Intake
Monensin @ 30g/ton diet	-10%	-10%
Monensin @ 20g/ton diet	-8%	-6%
Lasalocid in diet	-8%	-2%

# Temperature

Temperature effects the voluntary intake of cattle:

Temperature	Voluntary Intake
Heat Stress: Above 95 F (35 C) with no night	-5%
cooling	
Normal: From 41 - 95 F (5 - 35 C)	0%
Cold Stress: Below 41 F (5 C)	+5%

# Mud

Mud effects the voluntary intake of cattle:

Mud	Voluntary Intake
Mild mud: 4 - 8 inches (10 - 20 cm)	-15%
Severe mud: 12 - 24 inches (30 - 60 cm)	-30%

# FEED LIST SCREEN

	0	OAT hay dough stage	399	0	1-03-	0
	0	OYSTERSHELL ground	430	0	6-03-481	1
	0	RICE hulls	563	0	1-08-075	0
	0	UREA 45% nitrogen	675	0	5-05-070	1
	0	WHEAT grain Soft red winter (SRW)	692	0	4-05-294	1

There is only one kind feed list screen for all beef cattle categories and for both evaluation and formulation modules. Enter the set of feeds that you wish to consider for ration formulation into the table on this page. If you are evaluating an existing ration, enter all of the feeds that are in the ration. The amount and price of feeds will be specified in another screen, the Ration screen.

# Delete Feed

To delete a feed, locate that feed in the feed list and remove the feed by clicking the [Delete] button. To delete all feeds, click the [Delete All] button.

### Sort Feeds

To sort feeds alphabetically on the feed names, click the [Sort] button.

### Add Feed

To add a feed to the list, click the Add button. The [Get Feeds] dialog box appears, as shown below:

Get Feeds						×
Select a Feed Librav						
0. Standard Library			~			$\mathbf{X}$
Select a Feed Group					5	
All Feed Groups			~			[123]
Select a Feed					÷	
ACORNS ACORNS white oak ALFALFA dehydrated 15% Phos ALFALFA dehydrated 17% Phos ALFALFA dehydrated 20% Phos ALFALFA dehydrated 22% Phos ALFALFA early bloom ALFALFA early vegetation ALFALFA hay 25% Crude Fiber ALFALFA hay 25% Crude Fiber ALFALFA hay 25% Crude Fiber ALFALFA hay 25% Crude Fiber ALFALFA hay 28% Crude Fiber ALFALFA hay 20% Crude Fiber ALFALFA meal 13% screenings ALFALFA meal 13% screenings ALFALFA meal 20% Crud Protein ALFALFA meal 20% Crud Protein ALFALFA pasture Selected Feeds	sphor sphor sphor					~
Library Feed Name	Feed Number	Feed Price	Feed Price Unit	International Feed Number	Feed Type	Maximum Volunray Intake
< To delete a selected feed, selecte	ct that row and th	en press the	DEL key on your k	eyboard.		>

First select a feed library. There are two feed libraries: (0) Standard feed library and (1) Alternate feed library. The standard feed library contains 708 standard feeds. Standard feeds are mostly available in the USA. The Alternate feed library contains 546 local feeds from the target country.

You can enter a feed number in the Feed Number slot at the right of the screen and click the [123] button to directly locate that feed in the library.

Once you select a feed you can click on it to add it to the selected feeds table at the bottom of the screen. You can inspect the nutrient contents of the selected feeds and If a feed is selected by mistake, you can delete it from the selected table by simply pressing the Delete key on your keyboard.

You can press the [Add Selected Feeds to the Diet] button to add them to the diet and exit the [Get Feeds] dialog box.

Once a feed is added to your diet, it breaks all its connections to the feed library. Any modification to a feed in the diet does not affect the corresponding feed in the feed library. To modify a feed in the feed library, you must navigate to the main menu and select the Feed Library Editor button. Any modification to a feed in the feed libraries do not affect the corresponding feed in the diet.

### Edit Feed

To edit a feed in the diet, press the [Edit] button. The [Edit Feed] dialog box appears as shown below:

Feed Nutrient Analysis		×

### Library

This is a read only field. We have two kinds of feed libraries: (0) Standard Feed Library; (1) Alternate Feed Library.

### Feed number

Each feed in the standard and alternate feed libraries has a unique number assigned to it. We recommend keeping the same number in the diet, but if you want to change it, it must be unique in the diet. Avoid duplicating numbers in the diet.

# International feed number

This field is optional. Common feedstuffs are assigned a 6-digit international feed number (IFN) for identification and computer manipulation. The first digit in the IFN represents the international feed classes:

- 1. Dry forages and roughages
- 2. Pasture, range plants, and forage fed fresh
- 3. Silage
- 4. Energy feeds
- 5. Protein supplements
- 6. Mineral supplements
- 7. Vitamin supplements
- 8. Additives

### Feed name

Each feed in the standard and alternate feed libraries has a unique name assigned to it. We recommend keeping the same name in the diet, but if you want to change it, it must be unique in the diet. Avoid duplicate names in the diet.

### Feed group

Each feed can be a member of one or more groups of similar feeds. By placing the feed into a group, you can put constraints on the group of feeds for ration formulation. Feeds with an identical group number are members of the same group. There are 13 feed groups, as shown below:

NAME	NUMBER
01. Dry forage, roughage	1
02. Pasture, range plant	2
03. Silage	3
04. Energy feeds	4
05. Protein supplements	5
06. Mineral supplement	6
07. Vitamin supplements	7
08. Additives	8
09. Energy and protein	9
10. By-products	10
11. Fat and oils	11
12. Molasses	12
13. Real Feeds	13

# Feed type

Each feed must be classified as either a roughage or a concentrate. Roughages are feeds containing a high amount of fiber, such as alfalfa hay and corn silage. All other feeds are concentrates.

# Feed dry matter

The dry matter percentage of a feed is 100 minus the moisture percentage of the feed. If a feed is totally dry, it has 100% dry matter. If, for example, the feed has a 20% moisture content, its dry matter percentage would be 80.

The rest of entry fields are for nutrient analysis. The nutrients are arranged in five groups: (1) Basic nutrients; (2) Major minerals; (3) Minor minerals; (4) Vitamins; and (5) Amino acids.

# Basic Nutrients

Basic nutrients are listed below:

DE	Digestible Energy	Mcal/kg
ME	Metabolizable Energy	Mcal/kg
NEM	Net Energy for Maintenance	Mcal/kg
NEG	Net Energy for Gain	Mcal/kg
TDN	Total Digestible Nutrient	% DM
СР	Crude Protein	% DM
UIP	Undegradable Intake Protein	% DM
DIP	Degradable Intake Protein	% DM
NPN	Non-Protein Nitrogen	% DM
EE	Ether Extract	% DM
ASH	Ash	% DM
CF	Crude Fiber	% DM
CELL	Cellulose	% DM
ADF	Acid Detergent Fiber	% DM
NDF	Neutral Diet Fiber	% DM
NCHO	Non-Structure Carbohydrate	% DM
НС	Hemicellulose	% DM
LIGN	Lignin	% DM

# Major Minerals

Major minerals are listed below:

CA	Calcium	% DM
CL	Chlorine	% DM
MG	Magnesium	% DM
Р	Phosphor	% DM
К	Potassium	% DM
NA	Sodium	% DM
S	Sulfur	% DM

# Minor Minerals

### Minor minerals are listed below:

СО	Cobalt	ppm
CU	Cupper	ppm
I	lodine	ppm
FE	Iron	ppm
MN	Magnesium	ppm
SE	Selenium	ppm
ZN	Zinc	ppm

# Vitamins

Vitamins are listed below:

VITA	Vitamin A	k IU/kg
VITD	Vitamin D	k IU/kg
VITE	Vitamin E	IU/kg

# Amino Acids

Amino acids are listed below:

ARGI	Arginine	% DM
HIST	Histidine	% DM
LYSI	Lysine	% DM
METH	Methionine	% DM
PHEN	Phenylalanine	% DM
THRE	Threonine	% DM

# Special Nutrients

Special nutrients are listed below. These are for future expansion of feed library.

NUT1	Nutrient 1	% DM
NUT2	Nutrient 2	% DM
NUT3	Nutrient 3	% DM
NUT4	Nutrient 4	% DM

There are two kinds of Ration screens: One for the evaluation module and the other for the formulation module. In the Evaluation module, the user specifies the amounts of feeds in the existing ration and the program evaluates the ration to see if it meets nutrient requirements. In the formulation model the program formulates a new ration and calculates amounts of feeds in the new ration, which meets nutrient requirements.

### Feed Amount

Enter the feed amount as kg on the "as fed" basis. For the feed amounts, we support up to six decimal places, so the user can enter gram and milligram amounts for trace minerals. If you have the price of feeds on as kg, multiply the price by 1000 to get the price per metric ton.

# Feed Price

Enter the feed price as local currency per metric ton on the "as fed" basis.

# Total Intake

The evaluation module shows the total intake as kg on the "As Fed" basis. The user can change the total intake by clicking the [Change Total Intake] button. The program automatically adjusts amounts of each feed in the diet to add up to the new feed intake.

You can use this feature to trick the program to enter feed amounts as percentage values. To do this, first enter feed amounts for a 100 kg diet. Then, click the [Change Total Intake] button and change the intake to a more reasonable value such as 10 kg. The program automatically adjusts amounts of each feed in the diet to add up to the new feed intake.

### Ration Summary

The evaluation module calculates nutrient concentration of the diet and display it in a scrollable region at the bottom of the screen. Click the [Refresh] button to refresh nutrient concentration in the diet. Currently this feature is not enabled but will eventually be active in future releases of the software.

# NUTRIENT CONSTRAINTS

The formulation module has four constraints: (1) Nutrient constraints; (2) Feed constraints; (3) Feed group constraints; and (4) Ration constraints. In this section, we describe the nutrient constraints screen.

Initially this screen is empty. You must click the "Recalculate" button to populate this screen with a set of nutrient requirements for energy (NEM), crude protein (CP), and minerals (calcium and phosphor). If you modify the animal information screen, you must click the "Recalculate" button to recalculate nutrient requirements.

The nutrient constraints displayed on this screen have been calculated based upon the animal information already entered on the previous screen. If you wish to change any of these constraints, you may do as follows:

# Add

To ADD a constraint, click the Add button. The Nutrients Constraints dialog box appears, as sown below:

🖳 Nutrient Concentrations		×
Internal Name	VITA Vitamin A	
Concentration Unit	K IU/kg	
Minimum Concentration Maximum Concentration		
Amount Unit	KIU	
Minimum Amount		
Maximum Amount		
	Cancel Save	]

Navigate to the [Internal Name] list box and select a nutrient from the drop-down list of all nutrients. For example, select [VITA Vitamin A]. The program automatically populates the units for concentration and amount of the selected nutrients. You can set the minimum and maximum concentrations or amounts.

# Delete

To delete a constraint, move to the line in the table containing the constraint that you wish to delete. Then click the "Delete" button to remove the constraint.

# Edit

First select a nutrient from the list and then click the edit button. The Nutrients Constraints dialog box appears, as shown above, with the difference that the nutrient name is grayed out and cannot be changed but you can change the minimum and maximum concentrations or amounts.

# FEED CONSTRAINTS

	Library	Feed Name	Minimum Amount 3	Minimum Type 3	Maximum Amount 3	Maximum Type
•	0	ALFALFA middlings bloom				
	0	ALMOND hulls 15 percent Crude Fiber				
	0	BUCKWHEAT grain				
	0	CALCIUM phosphate di				
	0	CORN grain flaked				
	0	FAT animal Hydroponic				
	0	MOLASSES cane				
	0	OAT hay dough stage				
	0	OYSTERSHELL ground				
	0	RICE hulls				
	0	UREA 45% nitrogen				
	0	WHEAT grain Soft red winter (SRW)				
4						>

This screen lists all the feeds that have been specified in the feed list. There are three categories of animals: (1) Lactating animals; (2) Dry animals; (3) Growing or finishing animals. Each of these categories haa their own feed constraints.

# Add

You cannot add a new feed to this screen, but you can edit or delete feed constraints. To add a new feed, you must go to the Feed screen and add a feed in that screen.

# Delete

To delete an existing feed constraint, navigate to that constraint and click the "Delete" button. This action clears both the minimum and maximum constraints for the selected feed.

### Edit

To edit a feed constraint, navigate to that feed and then click the "Edit" button. The Edit Feed Constraints dialog box appears, as shown below:

🖳 Edit Feed Constarints	_		×
Animal Type			
Growing Animals			
Feed Library			
0			
Feed Name			
ALFALFA middlings bloom			
Minimum			
Minimum Unit		_	
00 [KGAF] kgs as fed		<mark>~</mark>	
Maximum			
Maximum Type		_	
00 [KGAF] kgs as fed		<mark>~</mark>	
Cancel	Save	;	

The Animal Type, Feed Library, and Feed Name are grayed out and cannot be changed, but you can change the minimum and maximum constraints and their units.

# Minimum constraint

You can force a feed to be included in the ration by entering a minimum constraint amount. The program will then include at least this amount and maybe more when formulating the ration. After you enter the desired amount, you must specify a unit for the constraint by selecting one of the eight choices shown below. The commonly used unit is **00 [KGAF] kgs as fed**.

- 00 [KGAF] kgs as fed
- 01 [KGDM] kgs of dry matter
- 02 [%CDM] % of CONCENTRATE portion of ration on 100% DM basis
- 03 [%RDM] % of ROUGHAGE portion of ration on 100% DM basis
- 04 [%TDM] % of TOTAL ration on 100% DM basis
- 05 [%CAF] % of CONCENTRATE portion of ration on AS FED basis
- 06 [%RAF] % of ROUGHAGE portion of ration on AS FED basis
- 07 [%TAF] % of TOTAL ration on AS FED basis

You can set a feed constraint as amount (kg) or as percent (%) of ration based on 100% dry matter or on as fed basis. In case of the percent constraints, you can choose the percent of concentrate potion of ration, or percent of roughage portion of ration, or percent of total ration.

### Maximum constraint

You can limit the amount of feed in the ration by entering a maximum constraint on that feed. After you enter the desired amount, you must specify a unit for the constraint by selecting one of the eight choices shown below. The commonly used unit is **00 [KGAF] kgs as fed**.

To delete an existing minimum or maximum constraint, enter 0 for the amount.

# FEED GROUPS CONSTRAINTS

Roughages       Concentrates       1. Dry forage, roughage       10. By-products       11. Fat and oils       12. Molasses	4 8 3 3 1

	1				
13. Real Feeds	12				
4. Energy feeds	6				
5. Protein supplements	1				
6. Mineral supplement	2				
	6. Mineral supplement	6. Mineral supplement 2			

This screen lists all the feed groups that have been specified in the feed list. There are three categories of animals: (1) Lactating animals; (2) Dry animals; (3) Growing or finishing animals. Each of these groups have their own feed group constraints.

# Add

You cannot add a new feed group to this screen, but you can edit or delete feed group constraints. To add a new feed group, you must go to the Feed screen and add a feed of that group in that screen.

# Delete

To delete an existing feed group constraint, navigate to that constraint and click the "Delete" button. This action clears both the minimum and maximum constraints for the selected feed group.

# Edit

To edit a feed group constraint, navigate to that feed group and then click the "Edit" button. The Edit Feed Group Constraints dialog box appears, as shown below:

🖶 Edit Feed Group Constr	aints			-		×
Animal Type						
Growing Animals						
Feed Group Number						
-2						
Feed Group Name						
Roughages						
Minimum						
Minimum						
Minimum Unit						
00 [KGAF] kgs as fed					~	
Maximum						
Maximum Type						
00 [KGAF] kgs as fed					~	
		Cancel		Save	е	

The Animal Type, Feed Group Number, and Feed Group Name are grayed out and cannot be changed, but you can change the minimum and maximum constraints and their units.

# Minimum constraint

You can force a feed group to be included in the ration by entering a

minimum constraint amount. The program will then include at least this amount and maybe more when formulating the ration. After you enter the desired amount, you must specify a unit for the constraint by selecting one of the eight choices shown below. The commonly used unit is **07** [%TAF] % of TOTAL Ration AS FED basis.

- 00 [KGAF] kgs as fed
- 01 [KGDM] kgs of dry matter
- 02 [%CDM] % of CONCENTRATE portion of ration on 100% DM basis
- 03 [%RDM] % of ROUGHAGE portion of ration on 100% DM basis
- 04 [%TDM] % of TOTAL ration on 100% DM basis
- 05 [%CAF] % of CONCENTRATE portion of ration on AS FED basis
- 06 [%RAF] % of ROUGHAGE portion of ration on AS FED basis

### 07 [%TAF] % of TOTAL ration on AS FED basis

You can set a feed constraint as amount (kg) or as percent (%) of ration based on 100% dry matter or on as fed basis. In case of the percent constraints, you can choose the percent of concentrate potion of ration, or percent of roughage portion of ration, or percent of total ration.

### Maximum constraint

You can limit the amount of a feed group in the ration by entering a maximum constraint on that group. After you enter the desired amount, you must specify a unit for the constraint by selecting one of the eight choices shown below. The commonly used unit is **07 [%TAF] % of TOTAL Ration AS FED basis**.

To delete an existing minimum or maximum constraint, enter 0 for the amount.

# RATIO CONSTRAINTS

🎒 Be	ef_LA_Eng	g [RAITO_C	CONS] {Version 20	23.03.25} [Demo	_LC_G]		-	- 🗆	×

	۲.							>	
			1						-
	A	dd			Delete				
								Main Menu	

In this screen you can define ratio constraints to be used for ration formulation.

### Delete

To delete a ratio constraint, navigate to that constraint and click the "Delete" button.

# Edit

There is no button to edit a ration constraint. To edit a ratio constraint, you must delete it and then add it with new values.

### Add

To add a ratio to the list, click the "Add" button. The "Add Ratio Constraints" dialog box appears, as shown below:

Ratio Constraints	$\times$
Type           D Nutrient         V	
Numerator DE: Digestible Energy	
Denumerator DE: Digestible Energy	
Amount	
Unit O MIN AF minimum constraint, as fed basis	
Cancel Save	

# Туре

Ratio types are as follows:

- 0 Nutrient ratios
- 1 Feed ratios
- 2 Feed group ratios

### Numerator

Each ratio has two parts: a numerator and a denominator. If, for example, you are defining a calcium to phosphorus ratio, the numerator is calcium, and the denominator is phosphorus. Select a numerator from the drop-down list. For nutrient ratios, this list is populated by a list of nutrients. For feed ratios, this list is populated by a list of feeds in the diet. For feed group ratios, this list is populated by a list of feed by a list of feed so in the diet.

### Denominator

Each ratio has two parts: a numerator and a denominator. If, for example, you are defining a calcium to phosphorus ratio, the numerator is calcium, and the denominator is phosphorus. Select a denominator from the drop-down list. For nutrient ratios, this list is populated by a list of nutrients. For feed ratios, this list is populated by a list of feeds in the diet. For feed group ratios, this list is populated by a list of feed by a list of feed in the diet.

# Amount

You should enter a ratio constraint amount as a ratio of numerator to denominator and not as a percentage. For example, if you want to have twice as much calcium as phosphorus in the ration, you will define a calcium to phosphorus ratio of 2.

### Unit

Identify the type of ratio constraint by selecting a unit from the drop-down list. The program supports six units as listed below:

- 0 MIN AF minimum constraint, as fed basis.
- 1 MAX AF maximum constraint, on as fed basis.
- 2 EQL AF equality constraint, as fed basis.
- 3 MIN DM minimum constraint, dry matter basis.
- 4 MAX DM maximum constraint, dry matter basis.
- 5 EQL DM equality constraint, dry matter basis.

A minimum ratio constraint forces the ration to contain at least the minimum ratio or may be more.

A maximum ratio constraint forces the ration to contain at most the maximum ratio or may be less.

An equality ratio constraint forces the ration to contain exactly the specified ratio and nothing more nor nothing less.

The minimum, maximum, and equality ratio constraints can be on 100% dry matter basis or on as fed basis.

# Reports

🏐 Bee	f_LA_Eng [RPT] {Version 2023.03.25} [Demo_LC_G]	×

Rep	Select One or More reports         Ø 11 Animal Inputs         02 Methane Emission         03 Ration Composition: Roughages and Concentrates         04 Ration Composition: All Feeds         05 Price Range and Feeds Not Used         06 Nutrient Analysis         07 Performance         08 Energy and Protein Analyses of Feeds         09 Proximate Analysis of Feeds         10 Macro Mineral Analysis of Feeds	
	11 Trace Mineral Analysis of Feeds     12 Vitamin Analysis of Feeds     13 All	Generate Selected Reports
		Main Menu

The software supports 12 reports. Report 05 "Price Rane and Feeds Not Used" is only available in the formulation module. Report 07 "Performance" is only available in the evaluation module. The format of Report 06 "Nutrient analysis" is different in evaluation module than the formulation module. The columns for user constraints are available for formulation module. Because only in the formulation module the user can specify constraints.

### Report 01. Animal Inputs

This report displays information about Methane emission. The most important index is the Methane Conversion Rate (%), which ranges from 2 to 20 percent.

Global warming potential (GWP) is the heat absorbed by any greenhouse gas in the atmosphere, as a multiple of the heat that would be absorbed by the same mass of carbon dioxide (CO2). GWP is 1 for CO2. For other gases it depends on the gas and the time frame. Carbon dioxide equivalent (CO2e or CO2eq or CO2-e) is calculated from GWP. For any gas, it is the mass of CO2 that would warm the earth as much as the mass of that gas. Thus, it provides a common scale for measuring the climate effects of different gases. It is calculated as GWP times mass of the other gas. Methane has GWP (over 100 years) of 27.2 meaning that, for example, a leak of a ton of methane is equivalent to emitting 27.2 tons of

carbon dioxide. Similarly, a ton of nitrous oxide, from manure for example, is equivalent to 273 tons of carbon dioxide. The most recent Intergovernmental Panel on Climate Change (IPCC) report values for methane's 20-year GWP at 86 and 100-year GWP at 27.2.

# Report 03. Ration Composition (Important nutrients)

This report lists the amounts of important nutrients such ad energy (DE), crude protein (CP), fiber (CF, ADF). And minerals (CA, P) for each feed. The list is generated separately for roughages, concentrates, and total ration. The last row of each report shows the total amount of nutrients in the diet. In this example, we have 17.169 Mcal of Digestible Energy (DE), 846 grams of crude protein, 1.917 kg of crude fiber (CF), 35 grams of Calcium, and 19 grams of phosphor. The dry matte intake is 7.725 kg per day per head., which is equivalent of 8.613 daily intake on as fed basis. The diet consists mostly of alfalfa, buckwheat grain, and rice hull.

0	WHEAT grain Soft red winter (SRW)	0.000000	0.000000	0.000000	0.000000	137.78	156.57	0.00
		7.72	100.00	8.61	100.00	85.46	95.28	0.74

This report displays the amounts of all feeds used in the ration. The following information is included for each feed used in the ration:

- 1. The amount of the feed in the ration, lb/day or kg/day, as fed basis.
- 2. The percentage of the feed in the ration (or group), as fed basis.
- 3. The amount of the feed in the ration, lb/day or kg/day, on a 100% dry matter basis.
- 4. The percentage of the feed in the ration (or group), on a 100% dry matter basis.

In this example, The ration consists of 26% of alfalfa and 45% of buckweat grain, and 29% of rice hulls on "as fed" basis. The intake is 7.72 kg on "100% dry matter" basis or 8.61 kg on "as fed" basis. The ration price is 85.46 local currency per metric ton on "as fed" basis, or 95.78 local currency per metric ton on "100% dry matter" basis. The ration cost is about 0.74 local currency per head per day.

# Report 05. Price Range

#### Report 05. Price Range and Feeds Not Used

Report 05\_1. Feeds used in ration

Lib	Name	Amount Kg as Fed	Price at Formulation •/Metric ton As Fed	Lower Range Price •/Metric ton As Fed	Upper Range Price •/Metric ton As Fed
0	ALFALFA middlings bloom	2.266753	137.79	112.72	150.17
0	BUCKWHEAT grain	3.843945	110.23	93.79	121.79
0	RICE hulls	2.502326	0.00	-115.26	62.88

#### Report 05\_2. Feeds not used in ration

Lib	Name	Price at formulation •/Metric ton As Fed	Oppurtunity price •/Metric ton As Fed
0	ALMOND hulls 15 percent Crude Fiber	82.67	14.76
0	CALCIUM phosphate di	529.10	-28.14
0	CORN grain flaked	132.28	108.05
0	FAT animal Hydroponic	264.55	124.08
0	MOLASSES cane	88.18	49.77
0	OAT hay dough stage	110.23	90.26
0	OYSTERSHELL ground	110.23	-28.72
0	UREA 45% nitrogen	264.55	215.83
0	WHEAT grain Soft red winter (SRW)	137.78	108.94

This report displays the following information for feeds used in the ration:

1. The amount of each feed in the ration, lb/day or kg/day on an as fed basis.

2. The current price of the feed on an as fed basis.

3. The lower range of the feed price. This is the lowest price that the feed can have without affecting its amount used in the ration. If you change the feed to a price below the lower range and then reformulate the ration, the ration composition will change to include more of that feed. Other feeds previously used in the ration may no longer be used. If the lower range is negative, it is not practical to use more of the feed in the ration. If the lower range is -999999.99, the feed amount in the ration cannot be increased due to a maximum constraint on that feed.

4. The upper range of the feed price. This is the highest price that the feed can have without affecting its amount used in the ration. If you change the feed to a price above the upper range and then reformulate the ration, the ration composition will change to include less of that feed, or the feed may be eliminated from the ration. If the upper range is 999999.99, the feed amount in the ration cannot be decreased due to a minimum constraint on that feed.

Report 05\_2 displays the following information for feeds not used in the ration:

1. The current price of feeds on an as fed basis.

2. The opportunity price of feeds. This is the price that the feed must drops into it in order for it to be used in the ration. If you add a feed with a price of \$10000 per cwt to the feed list and then formulate the ration, the feed will not be included unless it contains some necessary nutrients that are not available from any other feed. If the feed is not used, it would become a good buy if its cost were less than or equal to the opportunity price.

		0.019	kg				0.019	

This report displays nutrient analysis for all feeds in the ration. The following information is included:

1. **Amount and type**. Two lines are displayed for each nutrient: line 1 is the CONCENTRATION (percent, ppm, Mcal/lb, etc.) of the nutrient. Line 2 is the AMOUNT (lb, kg, Mcal, etc.) of the nutrient contained in the ration.

2. **NRC recommendation**. This is the nutrient amount recommended by the National Research Council. These amounts are calculated internally by the program, based upon the data that you supplied on the Animal Information page. Not all NRC amounts are used as constraints for ration formulation. By comparing the NRC recommendation with the actual amount of the nutrient in the ration, you can determine if the ration is deficient in that particular nutrient.

In the formulation module, you will also see the following:

**3. Minimum and maximum constraints**. These are the constraints which were used by the program when the ration was formulated.

In this example, NRC requirement for dry matter intake of 7.725 kg is satisfied. NRC requirement of 1.07 Mcal/kg of Net Energy for Maintenance and 0.58 Mcal/kg of Net Energy for Gain are satisfied. NRC requirement of 0.846 kg of Crude Protein is satisfied. NRC requirement of 29 g of Calcium and 16 g of Phosphor are satisfied. NRC requirement of 0.846 kg of Crude Protein is satisfied. In terms of energy, crude protein and minerals this is a balance ration.

Report 07 displays the performance information. Report 08 lists basic nutrient analysis of feeds. Report 09 lists major minerals analysis of feeds. Report 10 lists minor minerals analysis of feeds. Report 11 lists vitamins analysis of feeds. Report 12 lists Amino Acids Analysis of Feeds.

Digestible Energy (DE) (Mcal/kg)	2.74			
Metabolizable Energy (ME) (Mcal/kg)	2.25			
Net Energy for Maintenance (NEM) (Mcal/kg)	1.38			
Net Energy for Gain (NEG) (Mcal/kg)	0.94			
Net Energy for Lactation (NEL) (Mcal/kg)	1.4			
Total Digestible Nutrients (TDN) (% DM)	62.23			
Defaults	Help Calculate Main Menu			

This module calculates the energy values of a feed using the basic nutrient analysis of feeds, which consists of crude protein (CP), non-protein nitrogen protein equivalent, fat or oil or ether extract (EE), ash, and crude fiber (CF). For air-dried feeds the dry matter of feed is usually about 90%.

The input entries are on "as fed" basis, but the output values are on 100% dry matter basis. The program provides a "Default" button to populate the input entries with default values. We recommend that you use this button and then modify the input entries.

### Feed Name

Assign a name for feed. Example, ALFALFA. The feed name is not used in the energy calculation. It is just for identification.

### Feed Group

Select a group for feed. Example, Dry forage and roughage: Legumes. The feed group is used for energy calculations. Thde program support seven feed groups as listed below:

- 1. General
- 2. Dry forage and roughage, legumes
- 3. Dry forage and roughage, non-legumes
- 4. Pasture and range plant

- 5. Silage
- 6. Energy feeds
- 7. Protein Supplements feeds

If you do not know the feed group, select the General option.

### Dry Matter of Feed

Enter a value between 1 to 100%. Example: 90.00%

*Crude Protein (CP)* Enter a value between 0 to 100%. Example: 90.00%

### NPN Protein Equivalent

Enter a value between 0 to 100%. Example: 0.00%

*Fat or Oil (EE)* Enter a value between 0 to 100%. Example: 2.70%

### Ash

Enter a value between 0 to 100%. Example: 9.80%

### Crude Fiber (CF)

Enter a value between 0 to 100%. Example: 23.00%

After entering input values, click the Calculate button, The program calculates energy values, using the following algorithm:

### Step 1

Converts all values to 100% DM basis.

### Step 2.

Calculates Digestible Energy, Mcal/kg, for different groups:

General:

DE= 3.916828 - 0.00812 \*CP+0.04554 \* EE-0.0176 \* ash-0.0422 \* CF

Dry forage and roughage, legumes:

```
DE= 2.811904 + 0.0209413*CP + 0.006492 *EE + 0.01302*ash - 0.0274 *CF
```

Dry forage and roughage, non-legumes:

```
DE= 3.264743 + 0.06363 *CP - 0.0761 * EE - 0.0508 *ash -0 .0283 *CF
```

Pasture and range plant:

```
DE= 3.723255 + 0.002459 *CP + 0.0815818*EE - 0.0211 *ash - 0.036135 *CF
```

Silage

```
DE= 3.681242 - 0.0130 *CP + 0.04553 *EE - 0.0328 *ash - 0.0284 *CF
```

Energy feeds

```
DE= 3.729697 + 0.008047 *CP + 0.04582 *EE - 0.0393 *ash - 0.0392 *CF
```

Protein Supplements feeds

```
DE= 4.706482 - 0.0158 *CP + 0.034633 *EE - 0.0241 *ash - 0.0598 *CF
```

# Step 3

Corrects for Non-Protein Nitrogen Protein Equivalent:

DE = DE \* (1-(CP \* NPN/28200))

### Step 4

All other energy values are calculated by using DE.

Metabolizable Energy, Mcal/kg:

ME = 0.82 \* DE

Net Energy for Maintenance, Mcal/kg:

NEM = 1.37 \* ME - 0.138 \* ME \* ME + 0.0105 \* ME \* ME \* ME - 1.12

Net Energy for Gain, Mcal/kg:

NEG = 1.42 \* ME - 0.147 \* ME \* ME + 0.0122 \* ME \* ME \* ME - 1.65

Total Digestible Nutrients, %:

TDN = 100 \* (DE/4.4)

Net Energy for Lactation, Mcal/kg:

NEL = 0.0245 \* TDN - 0.12

### Step 5

Converts to English system, if necessary.

	Main Menu	

There are three feed libraries:

- 0 Standard Feed Library
- 1 Alternate Feed Library
- 2 Infeasible Feed Library

The standard feed library contains 708 standard feeds. Standard feeds are mostly available in the USA. The Alternate feed library is populated with local feeds from Laos. The infeasible feed library contains special feeds that are used to trouble sh0ot the least cost formulation results.

# Edit

To edit a feed, navigate to that feed and then press the [Edit] button. The [Feed Nutrient Analysis] dialog box appears as shown below:

Feed Nutrient Analysis X					
Edit Feed					
	Library	0. Standard Library	✓	^	
	Feed Number	708	]		
	International Feed Number	6-05-555	]		
	Feed Name	ZINC sulfate			
	Feed Group	3. Silage	~		
	Feed Type	2. Concentrate	~		
	Maximum Volunray Intake (%)	0	]		
	Feed Dry Matter (%)	99	]		
	Digestible Energy (Mcal/kg)	0	]

	Ash (% DM)	0		~	
		Cancel	Save		

For description of entries in this screen, please refer to the Feed List section of this manual.

# Add

To add a new feed, press the [ADD] button. The [Feed Nutrient Analysis] dialog box appears. The data entries are like ones described for the Edit operation, described above.

# Delete

All feeds in the standard and infeasible libraris are locked and cannot be deleted. But if you add your own feeds to these libraries, you can delete them because they will not be locked.

# Export to another library

You can export feeds from the standard library to the alternate library and then modify them in the new library. This is one way to populate the alternate library with feeds from the standard library and then modify them to match the local feeds.

# Export to Excel

You can export feed libraries to Excel and inspect them in Excel. The exported files will be store in the "xls" subdirector of the main folder of the at: C:\Program Files (x86)\UCDAVIS\GlobalFARP\xls\

If the export operation is successful, the program displays a message, telling the user where to find the exported Excel file.

The file name for the standard feed library for Laos in English is TauStd\_LA\_Eng.xls, The file name for the standard feed library for Laos in Lao is TauStd\_LA\_Lao.xls.

# Structure of feed libraries

Each feed library has 77 columns as listed below:

Column	Internal Name	Display Name	Metric Unit
1	LIB	Library	
2	NAME	Feed Name	
3	NUMBER	Feed Number	
4	PRICE	Feed Price	
5	PRICEUNIT	Feed Price Unit	
6	INTFEEDNO	International Feed Number	
7	TYPE	Feed Type	
8	MVI	Maximum Voluntary Intake	%
9	DM	Feed Dry Matter	%
10	DMBASIS	Dry Matter Basis	%
11	G1	Feed Group	
12	G2	Second Feed Group	
13	G3	Third Feed Group	
14	G4	Fourth Feed Group	
15	MINAMT1	Minimum Amount 1	
16	MINTYPE1	Minimum Type 1	
17	MAXAMT1	Maximum Amount 1	
18	MAXTYPE1	Maximum Type 1	
19	MINAMT2	Minimum Amount 2

# Feed Groups

The program supports 13feed groups as listed below:

NAME	NUMBER
01. Dry forage, roughage	1
02. Pasture, range plant	2
03. Silage	3
04. Energy feeds	4
05. Protein supplements	5
06. Mineral supplement	6
07. Vitamin supplements	7
08. Additives	8
09. Energy and protein	9
10. By-products	10
11. Fat and oils	11
12. Molasses	12
13. Real Feeds	13

The program currently does not provide any utility to modify this database, but we are planning to add this capacity in future releases of the software.
